

## FormParameterizerElements.New() error

Posted by isburns - 2007/11/29 22:51

---

In ArcGIS 9.0 and 9.1, when trying to do the Element Parameterization the following appears.  
[http://www.tucson.ars.ag.gov/agwa/components/com\\_fireboard/uploaded/images/error1.png](http://www.tucson.ars.ag.gov/agwa/components/com_fireboard/uploaded/images/error1.png)

In ArcGIS 9.2 the following error appears  
instead.[http://www.tucson.ars.ag.gov/agwa/components/com\\_fireboard/uploaded/images/error2.png](http://www.tucson.ars.ag.gov/agwa/components/com_fireboard/uploaded/images/error2.png)

This occurs because the Datafiles directory does not exist in the Home directory specified in the AGWA2 Preferences form. AGWA requires the specific directory structure and files from the AGWA2 Datafiles download to function properly.

I'm deleting your other message because we don't need multiple threads on the same topic.

Can you double check that you have followed the instructions because the only known condition to cause this error is stated above.

Open the Preferences form under the Other Options menu. What is the HOME folder set to? Now

navigate to the folder specified in the form. What folders exist within that folder?

what if i am using GAP? the manual says that GAP is "supported by AGWA2 natively" but the landcover lookup tables in the datafiles download only includes tables for NALC and MRLC. will GAP work with one of these tables?

---

There should be a swgap\_lut.dbf that was included with the AGWA 2.0 Datafiles. I didn't make the table and I'm not familiar with all of the GAP products, so I'm not sure if it is a comprehensive look-up table or if it only covers the Southwest.

i took a look at that table. i think i must just cover the southwest because none of the values matched anything in my GAP grid attribute table. it is still helpful though because i can at least see how it is formatted.

appreciate your prompt response.
